

ELEC3117 – Electrical Engineering Design

Marking Rubric – Power Supply Design Report (Week 3)

	Excellent	Very Good	Good	Poor	No marks
Project requirements (3 marks)	Detailed list of power requirements, voltage values, allowable ripple, current, and transient requirements presented in a neat and concise manner (e.g., table)	Mostly complete list of power requirements presented in an easily readable format	Incomplete list given - missing major components, current requirements, or major errors in the given requirements	Incomplete list given - missing several major components and no current requirements included	No list of requirements provided
Design details (3 marks)	All relevant calculations included, with reasoning provided for component selection, and neat, correct schematic of the design	Most relevant calculations included with some component selection justification and neat schematic with minimal errors	Missing majority of calculations with little to no justification of component selection and poorly drawn schematic	Only includes component values with no mention of calculations or reasoning for component selection and no schematic included	No design details provided
PCB layout (4 marks)	Flawless PCB layout with a paragraph on considerations made during layout	Workable PCB layout with a few justifications given	Functional PCB layout with a sentence on layout considerations	Very poor PCB layout with little to no justifications given	No PCB layout provided
Total (10 marks)					

Marking Rubric – Power Supply Design Demonstration (Week 7)

	Excellent	Very Good	Good	Poor	No marks
Power supply demonstration (2 marks)	PCB with all components soldered, produces smooth loaded output voltage	PCB fully or partially working, has an output with small ripple in loaded voltage	PCB partially working, output with large ripple in loaded voltage	PCB not working AND significant errors in component mounting	N No PCB OR PCB with no soldered components

Note: Smooth output ripple is < 100mV, small ripple is between 100mV and 300mV large ripple is above 300mV
